Corner plate 190x190 for aluminium profile 40x40

Simply strong

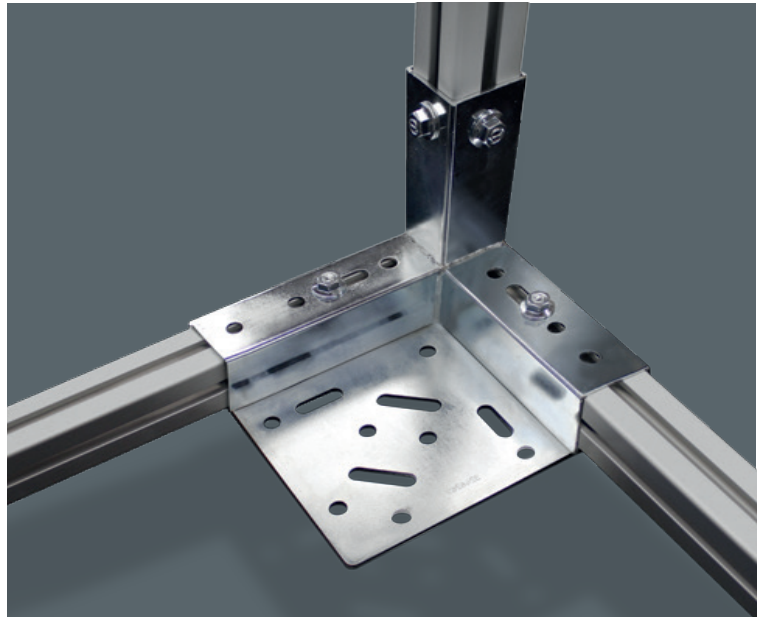

As another practical basic module for fixed and mobile constructions, the 190x190 corner panel is now also available for **40x40 aluminium profile**.

Due to the integrated mounting sleeves, stable shelving systems and table superstructures can be realised quickly and easily. In addition, the corner plate stabilises and reinforces the base frames of tugger train or pallet trolleys, for example.

The plate is available in a steel version with a black coating or with a galvanised surface (ESD-capable).

For wheels and castors Ø 160 mm and Ø 200 mm
With screw-on plate 80 x 105 mm

Protected transport goods
through secure hold of base
plates or containers

What is special about our LEAN corner panel?

- Simple assembly of aluminium profiles for stable and robust constructions
- Improved stability of the corner joints compared to conventional connection techniques
- Suitable base for superstructures, even on various base frames
- Easy replacement or retrofitting of castors

LEANPLUS

Simplification
of superstructures on
base frames

Flexibility
due to quick change of
profiles and rollers

Compatibility
with all aluminium
profiles of the 40 series

Stability
for safe transportation
of goods

The right material in the right place at the right time:
our LEAN transport trolleys offer all the advantages for
the organisation of your internal material flow.
